Hi Anthony Fauci,

I know you're busy, but I wanted to introduce our Company, Medical Partners International, and talk for a quick minute about what we do and how it can help you. As you know, the CDC has asked all healthcare facilities to prepare for the "worst case scenario" around the Novel Coronavirus. As much of our medical supply manufacturing in the US comes from overseas, it is of critical import to look at potential shortages of key products that will be needed to perform basic IP functions in your facility. We have already seen challenges with N95 masks, and I have heard about potential shortages of items like disinfection wipes. We at MPI have a couple of unique solutions you need to consider:

PureTabs and PureOne NaDCC tablets that are diluted in tap water to create HOCl for surface disinfection. They are currently used in electrostatic sprayers to offer greater coverage around your equipment. If, for some reason, there's a challenge getting the electrostatic sprayers in the future (and we've already seen shortages and delays in getting new units), simply use our NaDCC tablets with spray bottles from your local store to apply the HOCl for disinfection. Our tablets have kill claims for C. diff in four minutes, and like a number of other cleaning agents, we believe we can be effective against the Novel Coronavirus. The problem with the other products out there comes down to availability, particularly of the N95 masks that are required on their IFU's. With our product, an N95 mask is recommended, but not required, which is a huge distinction if you have run out of N95 masks.

Secondly, we have our protective scrubs, lab coats and privacy curtains from Prime Medical. Co-branded with Clorox, these products create a 3 log (99.9%) barrier against bacteria and viruses when washed with bleach. The barrier lasts for 12 weeks,
